Introduction to Robinsons

For over 60 years, amateur and professional growers alike have recognised Robinsons as being at the very forefront of the greenhouse world. Renowned for their strength, precision engineering and practical features, Robinsons greenhouses are still the benchmark against which other greenhouses are measured. If you want the best in your garden, then keep reading!

History

Started in 1947, the company has moved around over the years including spells at Winchester, Southampton and Southam. Now based in Staffordshire, a nice central location for nationwide distribution.

Still made in Britain today

All Robinsons greenhouses are made in our factory in Staffordshire. The aluminium raw material is also extruded in the UK.

Robinsons
ALUMINIUM GREENHOUSES

Made in the United Kingdom

Radley model shown in Old Cottage Green

This combination of box section bars and screwed-in capping system is what makes a Robinsons stand head and shoulders above other greenhouses

Strong Frame

Robinsons greenhouses are extremely strong, probably the strongest greenhouse available in the UK today. Its not just because we use far more aluminium in the frames (some sections are as much as twice as thick) its also because of the clever design.

NEW Box Section

Robinsons models use mostly box section glazing bars. This unique design is what sets Robinsons apart from other brands - which tend to use T-shaped sections. The box section design gives a far sturdier frame which is particularly resistant to twist -vital for strength in windy conditions.

Add to this the unique and extremely strong glazing method and extra sturdy A-frames placed at every joint with an extension module and the finished product is just about as sturdy and wind resistant as it gets.

*Note: New colours (Pastel Sage, Ivory, Anthracite and Old Cottage Green) will have an aluminium cover cap in matching colour. PVC on plain aluminium only.

Glazing

The Robinsons unique low-profile glazing method has been tried and tested now for well over 20 years. The fact that the capping is screwed in means that it is extremely strong and it is almost impossible for the glass to blow out.

Duraglaz 4mm Toughened Safety Glass

All Robinsons come with 4mm toughened safety glass as standard. This is 33% thicker than most greenhouses which use only 3mm (sometimes not even toughened) Toughened glass is 5-7 times stronger than standard glass and if it does break it disintegrates into small pieces - reducing the chance of injury. As a rough guide, it might survive a football but it probably wouldn't survive a cricket ball!

Go online to see a video of a van drive over the Robinsons 4mm toughened glass.

You Tube search You Tube for 'Robinsons mini greenhouse'
Broadcast Yourself™

This amazing demonstration of strength took place in September 2015. Although a special frame to level the roof was made, the greenhouse underneath was completely standard and unmodified! The mini weighs nearly 1.5 Tonnes.

Perfect ventilation as standard

Ventilation really is vital in your greenhouse and that's why all Robinsons greenhouses come complete with a generous allocation of roof vents, all fitted with Bayliss XL automatic openers. These clever devices work on heat expansion alone and simply open the roof vents as the greenhouse warms up in the sun. You can also fit optional auto-louvre openers to your louvre side vents if you wish to be fully automatic.

Louvre side vents included

Louvre side vents are now included on virtually every Robinsons greenhouse. Whilst the automatic roof vents will draw hot air out of the top of the greenhouse, the louvres will draw the cool fresh air in to replace it. It is this combination which makes the Robinsons ventilation system so effective.

Robinsons practical design features

High Eaves

At 5'6" high at the eaves, Robinsons are as much as 18" higher than some models. The extra height is vital for your own head room, but also for tall plants such as tomatoes and chrysanthemums. The height also gives you plenty of room for a high level shelf, and makes the air inside the greenhouse more stable and less susceptible to sudden temperature changes.

Easy-Glide locking doors with no step

The Easi-Glide Robinsons doors are very strong (the glass is securely held in with full length strips) and they slide beautifully. The Go-Lo low-level threshold means that you have no big step to trip over when entering the greenhouse and it allows easy access for wheelbarrows and wheelchairs. All the models that are big enough have double doors for nice wide access.

Universal fittings channel

The standard channel in the glazing bars means that you can easily buy extra useful fixings such as shading or insulation clips, L-shaped brackets, extra shelves etc.

Extend or move your greenhouse later

If you need to move your greenhouse or even extend it (in 6ft or 8ft modules) later then that can be done – giving you future flexibility. It is also worth noting that you can extend your greenhouse to any length – without partitions, due to the excellent strength of the specially designed A-frames which go on the extension joints.

Internal partitions - create two climates

Ideal for sectioning off a smaller propagation area or area for heating in the winter. These are available on the 8ft, 10ft, 12ft and 14ft models and come complete with sliding door or doors. A partition also adds considerable strength to your greenhouse.

Practical staging & shelving

Robinsons aluminium slatted staging and shelving is unusual in that it is fitted to the greenhouse rather than free standing. The advantage of this is flexible height positioning, no vertical legs so you can put bulky or heavy items such as compost or planters underneath on the floor. This also makes it wheelchair friendly.

The high level shelf is also unusual in that you can get a shelf along the whole length of the greenhouse – not always possible on all aluminium greenhouses.

FINGERTIP SLIDING DOOR

NYLOGLIDE
GREENHOUSE DOOR WHEELS

GO-LO
LOW LEVEL DOORWAY

Here's why it's worth investing in the best quality

At 5'6" high, at the eaves, a Robinsons greenhouse is one of the highest that you can get. Extra height gives you more headroom for plants such as tomatoes, chrysanthemums and vines, more space for a high level shelf, a more stable environment inside and more head room for you when working! Although other greenhouses can be high as well - the strength of the frame becomes vital as you go higher as the greenhouses become more vulnerable to wind damage.

Optional integral 3 slat shelf is very strong, adjustable to different heights and fills the whole length of the greenhouse.

Optional integral staging is extremely strong, and because it bolts to the side of the greenhouse, you can set it to the perfect working height, plus with no vertical legs in the way, you can make the most of your ground space.

Nice wide double doors (not every model) provide easy access and no step at door for easy wheelchair or wheelbarrow access.

Go-Lo is a properly engineered low level threshold for easy access. (Beware of additions to some greenhouses which are loose or no threshold at all which can be weak).

All Robinsons models come with generous ventilation including these roof vents fitted with Bayliss XL automatic openers. These ingenious devices simply expand in the rising heat and open the roof vent, releasing the warm air when needed.

Optional Victorian ridge cresting is made from cast aluminium in matching colour and adds a decorative touch to your greenhouse. Some gardeners tell us that it also deters pigeons from perching on the greenhouse roof.

R-Pro glazing bars are made using the unique Robinsons box section technology - This new improvement makes the Robinsons greenhouses one of the strongest and most reliable that you can buy. The sheer strength of the bars themselves means that we do not need to clutter up the inside of the greenhouse with dozens of messy braces - giving far 'cleaner lines' on a Robinsons greenhouse.

Pro-Cap PVC glazing capping is screwed in tightly to the aluminium frame using stainless steel screws. This grips the glass firmly onto an air filled rubber. The end result is an extremely strong glazing method with a final cover capping hiding the screw heads. This gives the whole structure of the greenhouse far more strength and a neat finish.

These Easi-Glide doors each have four Nyloglide door wheels for a smooth 'fingertip' opening

Integral aluminium guttering (for strength) and PVC downpipes included with every greenhouse - plus range of optional extra fittings available.

Duraglaz 4mm toughened glass throughout (33% thicker than many greenhouses) Plus these 1ft high kick panels are designed so that the most vulnerable area to breakage is a small one (and therefore cheaper to replace).

Attention to detail means that the Robinsons greenhouse is far better 'finished off' than many greenhouses.

These high quality louvres draw cooler air in to replace the warm air that is released by your automatic roof vents.

Locking door; catch helps prevent doors blowing open in strong winds.

Contemporary Colours

Stunning range of colours

Contemporary Colours (aluminium colour capping)

These five new colours are finished with a new aluminium capping system. Aluminium capping is less prone to fading in the sun than PVC capping - particularly on darker shades.

Old Cottage Green - Blend in with your garden with this pleasant green, like the windows from an old English cottage.

Pastel Sage - A pale stone colour with a greenish hint.

Ivory - This ivory colour is popular on Victorian models, the off-white shade adds a subtle antique effect.

Anthracite - Popular in the window industry, anthracite is a sophisticated and modern shade of dark grey.

Light Bronze - A metallic stone colour new for 2021.

Free colour sample plate - search for the code on the website or ask your agent for a **free** sample.

Classic Colour (PVC white capping)

This mill colour is finished with a white PVC capping.

Mill Finish - This is unprocessed aluminium. It will weather to a dull grey over time. Finished with a white PVC capping.

Robinsons
ALUMINIUM GREENHOUSES

Royale Reach

8x12 Royale Reach in Old Cottage Green with doors on the side

8'x12' Royale Reach shown in Anthracite with staging and shelf

Features

Position your doors on the side or end & fit extra shelving in. EXTRA high eaves of 6'6" give this greenhouse a fantastic atmosphere that gives you and your plants a whole foot of extra headroom over the standard height Royale model.

This extra height means that you can position your doors on the end or the side of the greenhouse. (End doors are standard. Side doors must be specified if required).

You will also have room to place two high level shelves above your staging - considerably increasing your growing capacity.

Robinsons ALUMINIUM GREENHOUSES Royale Reach (Extra High Eaves)

Note all prices shown are the net discounted prices incl VAT at 20%.

Contemporary Colours

These five colours are finished with a matching aluminium capping system. Aluminium capping is less prone to fading in the sun than PVC capping - particularly on darker shades.

Old Cottage Green - Blend in with your garden with this pleasant green, like the windows from an old English cottage.

Pastel Sage - A pale stone colour with a greenish hint.

Ivory - This ivory colour is popular on Victorian models, the off-white shade adds a subtle antique effect.

Anthracite - Popular in the window industry, anthracite is a sophisticated and modern shade of dark grey.

Light Bronze - A metallic stone colour new for 2021.

Classic Colour (with PVC white capping)

Mill Finish - This is unprocessed aluminium. It will weather to a dull grey over time. Finished with a white PVC capping.

Free colour sample plate - search for the code on the website or ask your agent for a **free** sample.

Finials & Cresting

2x Finials
(without cresting) €194

Auto-louvre €78

Internal Partition with single door

Internal roller blinds for roof or side

Hanging basket brackets pack of 10

Strong Frame

Low level door threshold

High Eaves

Dimensions

- A = 3208mm (10'6")
- B = See table
- C = 1692mm (5'6")
- D = 2546mm (8'4")
- E = 1200mm (4')
- F = 1870mm (6'2")

Options

Extra roof vents including auto opener M/PC €148/€179

Louvre side vents M/PC €213/€238

Hanging basket brackets (10) M/PC €26/€34

Additional double doors for plain end M/PC €715/€953

Internal Partition with single door M/PC €1494/€1789

Internal Partition with double door M/PC €1737/€2094

Internal blinds per
2' section €161

Recommended staging

On this Rosette model, you can fit the 35" wide 10 slat staging which just fills the 3ft or so to the side of the doorway. With the high level shelf above you then have a super set-up. Do bear in mind that not everyone can reach to the back of a 3' wide staging, so 25" 7 slat can be fitted instead.

Contemporary Colours

These five colours are finished with a matching aluminium capping system. Aluminium capping is less prone to fading in the sun than PVC capping - particularly on darker shades.

Old Cottage Green - Blend in with your garden with this pleasant green, like the windows from an old English cottage.

Robinsons
ALUMINIUM GREENHOUSES

Rosette Reach

Extra high eaves - on reach models, you can position a door on the side if you wish

Features

Position your doors on the side or end & fit extra shelving in. EXTRA high eaves of 6'6" give this greenhouse a fantastic atmosphere that gives you and your plants a whole foot of extra headroom over the standard height Royale model.

This extra height means that you can position your doors on the end or the side of the greenhouse. (End doors are standard. Side doors must be specified if required).

You will also have room to place two high level shelves above your staging - considerably increasing your growing capacity.

Robinsons Rosette Reach (Extra High Eaves)

10'9" Wide (3260mm)

- ✓ High Eaves ✓ Toughened glass ✓ Bar capping ✓ Guttering & Downpipes
- ✓ Auto-vents ✓ Ground level door threshold ✓ Louvre side vents

Specification

- Extra high eaves (6'6") for more space
- Extremely strong R-PRO box section glazing bars
- DURAGLAZ 4mm toughened safety glass
- PRO-CAP Screw-in capping system as standard
- Option to create double span models for extra wide greenhouses
- Locking double door with GO-LO low level threshold
- Doors can be positioned on end or side
- Integral gutter with downpipes
- Superb ventilation included (see table)

Robinsons
ALUMINIUM GREENHOUSES

Redoubtable

10'x36' Redoubtable in Anthracite with doors on the high side and R-type modification (where the back end goes against a wall)

Door Positions

Image shows doors on the high side of the greenhouse. You can position your double doors on the end or on the high side.

When the building is longer than 12ft it will consist of a main building plus an 8ft extension. There will be an A-frame at the joint for strength and the 4ft of the door opening can not clash with this A-frame. Please ask for advice about door positioning on longer models.

Robinsons Redoubtable

10'7" Wide (3208mm)

- ✓ High Eaves ✓ Toughened glass ✓ Bar capping ✓ Guttering & Downpipes
- ✓ Auto-vents ✓ Ground level door threshold ✓ Louvre side vents

Specification

- Unique 3/4 span design
- 5'6" high on the standard side and 6'6" on the high side.
- Extremely strong R-PRO box section glazing bars
- DURAGLAZ 4mm toughened safety glass
- PRO-CAP Screw-in capping system as standard
- Locking double door with GO-LO low level threshold

Hanging basket brackets (10) M/PC €26/€34

Additional double doors for plain end M/PC €715/€953

Internal Partition with double door M/PC €1911/€2304

Internal blinds per 2' section €161

Recommended staging

On this Redoubtable model, you can fit the 35" wide 10 slat staging onto the wider side. With the high level shelf above you then have a super set-up. If you want to add staging along the narrow side then it's best to use the 25" wide & 7 slat as this will fit nicely to the side of an end door. If you position your doors on the side you could even create a whole U-shape of staging - using the 37" along the side and 25" up each end.

Contemporary Colours

These five colours are finished with a matching aluminium capping system. Aluminium capping is less prone to fading in the sun than PVC capping - particularly on darker shades.

Old Cottage Green - Blend in with your garden with this pleasant green, like the windows from an old English cottage.

Internal blinds per 2' section €161

Recommended staging

When planning the layout in your Regal, you should try to use the full width to your advantage. This may mean that you go for 25" 7slat staging each side rather than the 35" wide 10 slat so that you can then add a bed or workbench in the middle with 2 paths. If you have a partition, then you may wish to consider having a U-shape of staging in the rear section for maximum efficiency.

Contemporary Colours

These five colours are finished with a matching aluminium capping system. Aluminium capping is less prone to fading in the sun than PVC capping - particularly on darker shades.

Recommended staging

When planning the layout in your Regal, you should try to use the full width to your advantage. This may mean that you go for 25" 7slat staging each side rather than the 35" wide 10 slat so that you can then add a bed or workbench in the middle with 2 paths. If you have a partition, then you may wish to consider having a U-shape of staging in the rear section for maximum efficiency.

Contemporary Colours

These five colours are finished with a matching aluminium capping system. Aluminium capping is less prone to fading in the sun than PVC capping - particularly on darker shades.

Old Cottage Green - Blend in with your garden with this pleasant green, like the windows from an old English cottage.

Pastel Sage - A pale stone colour with a greenish hint.

Ivory - This ivory colour is popular on Victorian models, the off-white shade adds a subtle antique effect.

Anthracite - Popular in the window industry, anthracite is a sophisticated and modern shade of dark grey.

Light Bronze - A metallic stone colour new for 2021.

Classic Colour (with PVC white capping)

Mill Finish - This is unprocessed aluminium. It will weather to a dull grey over time. Finished with a white PVC capping.

Free colour sample plate - search for the code on the website or ask your agent for a **free** sample.

The valley gutter is wide and strong enough to walk down for maintenance

Create larger models such as this triple span

Robinsons
ALUMINIUM GREENHOUSES

Royale Reach Double Span

17x12 Royale Reach Double Span in Anthracite

Features

Position your doors on the side or end & fit extra shelving in. EXTRA high eaves of 6'6" give this greenhouse a fantastic atmosphere that gives you and your plants a whole foot of extra headroom over the standard height Royale model. This extra height means that you can position your doors on the end or the side of the greenhouse. (End doors are standard. Side doors must be specified if required). You will also have room to place two high level shelves above your staging - considerably increasing your growing capacity.

Robinsons ALUMINIUM GREENHOUSES Royale Reach Double Span

17'7" Wide (5368mm)

- ✓ High Eaves ✓ Toughened glass ✓ Bar capping ✓ Guttering & Downpipes
- ✓ Auto-vents ✓ Ground level door threshold ✓ Louvre side vents

Hanging Basket
Brackets (10) €26/€34

Internal staging (tanalised timber tops)

6x8 model - you'll need your base to provide level support for the bottom track

Benefits of Robinsons Octagonal Greenhouses

Ultra strong box section corner bars. These chunky sections are extremely strong as well as giving the greenhouse 'clean lines' Screw in PVC Glazing capping. Glass is held in with full length PVC bar capping with stainless steel screws with an extra cover cap to hide the screws. The glass sits onto an air filled rubber beading and is then tightly gripped by the capping. This adds strength to the glazing - which is very securely held- and also to the greenhouse as a whole.

Good eaves and door height. Many Octagonal greenhouses on the market are quite low at the eaves and consequently, they tend to have low doors. These Renaissance models have full 6'2" high doors giving you easier access and more headroom for your crops and shelving. More included as standard. As a package these Robinsons

Renaissance models are extremely good value for money. They include a long list of items which are add-on costs on other greenhouse such as toughened glass, green finish, auto-vent for roof, staging all around and two high level side shelves. Plus guttering and downpipes.

Recommended staging

Robinsons slatted staging is an integral staging that is actually bolted to the side of the greenhouse. This has the advantage that it has no vertical legs which can be in the way for working and storage. You can also adjust the height of the staging when building so that it is at your perfect working height. It is very strong and the full length shelf is also extremely useful (it is hard to find a proper full-length shelf to fit many greenhouses).

Nominal base lengths Actual base lengths	6'7" 2012mm	8'7" 2632mm	10'8" 3252mm	12'8" 3872mm	8'1" Extension 2480mm

Recommended staging

Robinsons slatted staging is an integral staging that is actually bolted to the side of the greenhouse. This has the advantage that it has no vertical legs which can be in the way for working and storage. You can also adjust the height of the staging when building so that it is at your perfect working height. It is very strong and the full length shelf is also extremely useful (it is hard to find a proper full-length shelf to fit many greenhouses).

Special adaptations

There are a number of relatively easy modifications that can be made to a Robinsons greenhouse which will help you if you are needing a slightly more bespoke greenhouse:

Z-Type modification

This is where you build a brick wall (ONLY to an official special base plan) to the height of your choice and you put a full height building on top of the wall (i.e. 5'6" eaves height - plus your wall).

With Z-Type modification you can specify the height of the wall - The most common heights are 150mm, 300mm, 450mm and 600mm, as a course of bricks is usually 75mm. We then modify the door end of the greenhouse so that the door drops down to ground level, and adjust the glass above the door.

The cost of this modification is £300 per doorway. Please mark your order Z-Type-300 for example for a 300mm wall. Then we will send you an official brick base plan to work to.

V-Type modification

This is where a side of your greenhouse is removed and a valley gutter assembly is attached so that it can join onto an existing wall. Some minor onsite fabrications are required, information is provided on how to do this. Please ensure that the wall is straight, and strong enough to support part of the greenhouse

A special dimensions drawing will be generated for you and sent along with your order confirmation.).

10x30 Rosette Z-type-150

12 x 24 ft Regal Z-Type on a 600mm wall

V-Type model shown is a Robinsons Roemoor 15ft x 37ft (page 55)

R-Type modification

This is where you have the rear end of your greenhouse removed so that it can join onto an existing wall. This allows you to create a totally different type of lean-to greenhouse - more like an Edwardian style.

To order an R-Type greenhouse - please simply specify 'R-Type' Greenhouse on your order form and you can also knock 10% off the price of the main greenhouse (up to 12ft) only - not extensions or accessories

We will then remove the back and add some extra glazing bars which can be joined against the wall.

This image shows a Rushby R-type model (the end removed to go against a wall)

Fitting service

These modifications can easily be made in the factory, but there are no special instructions written, so it's usually best to engage an experienced Robinsons greenhouse fitter to do these jobs. Please discuss this with your local expert.

8x16 Rushmoor in Pastel Sage with a R-Type modification where the back goes against the wall

Internal partitions can also be modified for the Z-Type

12 x 24ft Regal Z-type on a 450mm wall

THE ROBINSONS VICTORIAN

This Robinsons Victorian range offers you a choice of greenhouses with a distinctive Victorian style.

The addition of cast aluminium spandrels at both eaves and ridge strengthens the greenhouse considerably and the extra height created by the more traditional 45 degree pitch to the roof gives more air in the greenhouse as well as more room for specimen plants. The 45 degree roof pitch is also said to be better for light transmission.

IMPROVED FEATURES WHICH SET THE VICTORIAN RANGES AT A LEVEL ABOVE THE STANDARD RANGE.

- Extra wide guttering with Victorian styling.
- Cast aluminium spandrels increase strength and improve the Victorian look.
- New hinged door with wide access, lock and low threshold.
- Choice of glass to ground or dwarf wall models.
- 45 degree pitch of roof gives extra height, better atmosphere and more light transmission as well as Victorian feel.
- Louvre side vents included as standard.
- Extra strong box section ridge bar for rigidity.
- Increased number of automatic roof vents.

MODELS AVAILABLE

Choice of colours (see product pages). All models available as glass to ground or dwarf wall versions.

ROEMOOR DWARF WALL 15'9" DEEP (4791MM)

The dwarf wall version of the Reicliffe is called the Roemoor.
 You would need to build a 525mm high dwarf wall (to the official plan) for this greenhouse to sit on. The price and sizes are the same as the Reicliffe glass to ground model.

Accessories

Staging

Robinsons staging & shelving is unique as it is fixed to the greenhouse frame and so has no vertical legs getting in the way. When assembling, you can adjust it to your perfect working height. The high level shelf is very useful for extra storage and the staging itself can be in the 7 slat version which is 25" wide or the 10 slat version which is 35" wide. These extra wide versions are ideal for the Rosette and Regal greenhouses.

Robinsons Aluminium Slatted Staging System

	Mill finish	Colour finish
4' long shelf 11"(3 slat) wide	€86	€131
6' long shelf 11"(3 slat) wide	€131	€176
4' long Staging 20"(5 slat) wide	€169	€244
6' long Staging 20"(5 slat) wide	€244	€359
4' long Staging 25"(7 slat) wide	€200	€287
6' long Staging 25"(7 slat) wide	€287	€420
4' long Staging 35"(10 slat) wide	€287	€420
6' long Staging 35"(10 slat) wide	€398	€623

Simply add 4 & 6ft modules together to form one continuous run.

Extra Roof Vents

Vital in the greenhouse, Robinsons vents always come with a Bayliss XL automatic opener. Its always best to order extras with your greenhouse as we will then adjust the glass accordingly.

Price: M/G €147/€179

Auto-vents

You can buy replacement Bayliss XL units. They come complete with clamps which enable them to fit any greenhouse. **Price:** €70

Louvre Side Vents

Its crucial that you have a good combination of louvres low down in the greenhouse and roof vents high up – the roof vents then open automatically and the hot air rises out through them – this then 'sucks' cool fresh air in through the louvres – so even if the louver is facing a hedge or fence it will still work effectively. Size 2'x2'.

Price: M/G €202/€240

Auto-louvres

For the ultimate in automation add these automatic louver openers and fix them to your louvres. That way you can be sure that you're never caught out by a sunny spell. **Price:** €78

Internal Roller Blind

This super quality roller blind is specially designed for the Robinsons greenhouse and bolts to the glazing bars at the top of the roof. You can then pull the blind down and hook on by the gutter. Blinds are ideal to help you control the environment during the hotter weather. Internal blinds have the advantage that they are not savaged by the wind and they still allow beneficial warmth in whilst stopping harmful direct sun burn. Can also be fitted on a side of greenhouse.

Standard Blind **Price:** €161

Narrower Blind for section in front of partition **Price:** €181

Hanging Basket Brackets

Everyone needs a pack of these universal L-shaped brackets which can be used almost anywhere in the greenhouse with the help of the crop- head bolts which can twist into the channel anywhere on a glazing bar. You can use these for tying up wires for support, hanging baskets and many other uses - a real must! **Price:** €26/€34

What sort of base should I prepare?

There are lots of choices for your base, the main principles being that the base should be firm, level and square.

The most popular option is level paving slabs as these are easy to lay, and water can drain away between the slabs. Remember that water must be able to get away, so sealed solid bases such as painted or tiled concrete can result in lying water unless drainage is built in.

Water will also be free to move in or out of the greenhouse in between the cill and the slabs - if you are growing in strict humidity controlled conditions, then you may wish to keep this to a minimum and in this instance, we recommend that you build a one brick high plinth for the greenhouse to sit on.

Your base will affect the long term strength and stability of your greenhouse, so it is worth investing at this stage. It is vital that your greenhouse is anchored down to the base. With most models we supply L-shaped brackets and screws & rawl plugs for this purpose.

Bases such as Tarmac or block paving are not ideal as anchorage can be difficult. Note that gravel is not best friends with greenhouses either - if you really want gravel nearby choose a large size stone so that it doesn't interfere with the door. Your local distributor may be able to help you with your base.

Please note that no greenhouse is an exact size in feet - they are always bigger than the nominal size - so what is called an 8x10 greenhouse would actually be nearer to 8'6" x 10'8".

Please only prepare a base when you are in possession of the official base sizes which are only given in mm, we send these out with your order confirmation.

For dwarf wall models we will supply a detailed plan of the wall measurements.

Can you assemble the greenhouse for me?

All Robinsons greenhouses are sold on a 'self-assembly' basis, and will be delivered in kit form, however we do recommend that you engage an experienced greenhouse fitter to assemble the greenhouse for you. Your local Agent will be able to arrange this for you.

Delivery Times

Your greenhouse will be hand made to order and delivery times vary throughout the year. At the time of writing it is approx 8-10 weeks.

Delivery Costs

Mainland UK Free delivery, except postcodes AB, DD, IV, KW, PH and TR +£100. For off-shore, we can crate the glass and pack for onward shipment for £100. Any shortages can only be sent to mainland address. Accessories ordered alone will attract a carriage charge (usually £10, or £3 if postable).

Guarantee

Your Robinsons greenhouse comes with a free 10 year frame guarantee. This covers the frame and powder coating against faulty manufacture. Moving parts are guaranteed for 12 months.

Exclusions include: glazing, wind damage, Labour, and accidental damage.

Where can I order my greenhouse

From your local Agent - to find your nearest, please enter your postcode into the website:

www.robinsonsgreenhouses.co.uk

Your local agent:

Please note that no greenhouse is 100% waterproof, and we do not recommend that non-greenhouse items such as soft furnishings are used in a greenhouse. E&O E.
